

Developer Resources

This page lists the different resources that can be useful for developers.

Source code repository

You can check out the source code from the anonymous Subversion repository with the following command:

```
svn checkout https://svn.mucommander.com/mucommander/trunk mucommander
```

You will be warned that the server certificate can't be trusted, this is just a warning, not an error. For additional information on how to use the SVN repository and compile muCommander, please refer to the [Developer's Quickstart guide](#).

Alternatively, you can download a [nightly snapshot](#) of the source code (tar.gz, 5.6 MB)

Repository browser

The Subversion repository can be browsed online:

- [Browse](#) the SVN repository online
- View the latest checkins ([HTML](#) | [RSS](#))

Javadoc documentation

The Javadoc documentation is available online. It is refreshed every night, to reflect the current state of the [SVN trunk](#):

- [Browse](#) the documentation online
- [Download](#) the documentation for offline viewing (tar.gz, 4.2 MB)

Developers forum

The [developers forum](#) is a good place to get in touch with other developers, ask questions, submit patches...

Developers mailing list

Some of the discussions between developers happen on a mailing list : <http://groups.google.com/group/mucommander-dev>

You can take a look at it to get a feel for what's currently being discussed, or apply for membership if you'd like to participate (the list is currently invite-only).
